

# Electrostatic Spraying & Sanitizing Service

As part of our ongoing and always-evolving efforts to offer our clients a variety of effective and cost-efficient services, JanNet is introducing the latest in our service options geared towards complete sanitization and disinfection.

The **electrostatic spraying and sanitizing service** is a touch-free program that utilizes Victory Innovation's cordless electrostatic sprayers (in handheld and backback form) in conjunction with US EPA-registered virucidal disinfectant tablets to deliver a powerful spray of electrically charged solution, which is able to wrap conductive surfaces with an effective and even coverage. Double-charged particles envelope all conductive surfaces – shadowed, vertical and underneath.

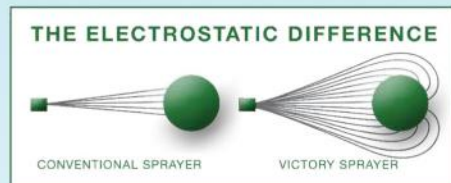

## Touch Free

Prevents cross-contamination by eliminating the need for spray-and-wipe methods that often move bacteria from one surface to another.

## Victory Innovations Patented Technology

The process of positively charging the liquid starts at the charging ring and flows to the tank. This way all the liquid has a positive charge prior to reaching the nozzle. As most surfaces are either negative or neutral, the dispersed droplets spread out more evenly and seek out a negative or neutral surface.

## Effervescent Disinfectant & Sanitizer Tablets

Delivers more potent, longer lasting disinfection power in the form of chlorinated effervescent tablets that are strong and cost effective while being less damaging to surfaces and equipment.
